To our professional customers and colleagues:

This is the fifth edition of our attachments manual which profiles the very popular Bredent attachment systems. We are pleased to inform you that Dent-Line of Canada Inc. has been licensed to sell medical devices in Canada since 1998. We are also required by the Medical Device Regulations to have an Establishment License # 273 which allows us the right and privilege to sell the Bredent attachments nationally. Our company complies with Health Canada's Therapeutic Products Program Directorate and we currently have over twenty-five licenses.

Our goal is to provide a comprehensive manual which outlines our most commonly used attachments. In addition to this reference guide, we provide assistance in case planning and technical support for all dental health professionals.

Bredent attachments are manufactured in Germany and incorporate the latest Cad Cam screw and milling machines. All parts are manufactured to CE, EM 46001 medical device certification, GMBH and ISO 9001. Dent-Line also meets the terms laid out by the Canadian Medical Devices Conformity Assessment System (CMDCAS) with valid copies of certificates DIN EN ISO 13485:2003 in general and DIN EN ISO 13485:1996 for medical devices. As part of our corporate mandate we will endeavor to provide prompt customer service, superior technical assistance and quality components.

Should you require any additional information, I would be glad to assist you.

Yours sincerely,

Peter T. Pontsa, RDT
President
Dent-Line of Canada Inc.

Technical Assistance:

A nos clients praticiens et à nos collègues:

Voici la cinquième édition de notre catalogue qui présente le très populaire système d'attachements Bredent. Nous avons le plaisir de vous informer que Dent-Line of Canada Inc. est agréé pour la vente de dispositifs médicaux au Canada depuis 1998. Les Réglementations sur les Dispositifs Médicaux nous imposent également de posséder une Licence d'installation #273 qui nous donne le droit et le privilège de vendre les attachements Bredent à l'échelle nationale. Notre compagnie se conforme aux Directives du Programme des Produits Thérapeutiques de Santé Canada et nous avons plus de vingt-cinq certifications pour les instruments médicaux.

Notre objectif est de créer un catalogue exhaustif qui mette en valeur nos attachements les plus souvent utilisés. En plus de ce guide de référence, nous fournissons un support pour la planification des traitements et un support technique pour tous les professionnels dentaires.

Les attachements Bredent sont fabriqués en Allemagne, en utilisant les équipements CAO/FAO les plus récents en matière de vis et de fraisage. Toutes les pièces sont manufacturées en conformité avec les normes CE, EM 46001, GMBH et ISO 9001 pour la certification des dispositifs médicaux. Dent-Line rencontre aussi les normes établies par le Canadian Medical Devices Conformity Assessment System (CMDCAS) avec des copies conformes des certificats DIN EN ISO 13485:2003 en général et DIN EN ISO 13485:1996 pour les dispositifs médicaux. Nous nous engageons à fournir un service rapide aux clients, un support technique et des composants de haute qualité en conformité avec notre mission.

Si vous désirez des informations supplémentaires, il me fera plaisir de vous répondre.

Sincèrement vôtre,

Peter T. Pontsa, RDT
Président
Dent-Line of Canada Inc.

	430OC206 supersnap	06	(14 pounds of retained force)	Light Red

Bredent recommends the following helpful hints to produce a successful long lasting prosthesis:

1. Attachment males must be cast in at least 270 Vickers Hardness to prevent premature wearing of the ball.
2. Never over-polish the male parts since this will hinder adequate retention.
3. For new cases always begin with the lowest retention level first, which is Green Level # 1.
4. Remind your patients not to "bite" their prosthesis in place, but insert with finger pressure.
5. Patients need to clean their prosthesis at least twice daily; studies have shown that premature wear can occur to the prosthesis if not cleaned regularly.
6. Patients must see their dental health practitioner at least every six months to check the accuracy of the fit of their prosthesis, failing to do this will compromise the longevity of the case.
7. Should higher retention levels be needed, go up one level at a time to ensure patient comfort and ease of use.

Pick-up Attachments with Qu-Resin.

Pick-Up Attachments Intraorally or Repair Dentures in Minutes with Bredent's New Qu-Resin and Qu-Connector - Chairside Or In- Laboratory!

Qu-Resin has been developed for use as a denture repair resin and can achieve perfect bonding between the denture base and high impact acrylics or acrylic teeth using the coupling agent called Qu-Connector. This quick setting self-curing, two component denture repair resin system on a diacrylate and sets in 3 minutes. Repairs can be done chairside by the Dental Health Practitioner or by the Dental Technologist in the Laboratory. Use Qu-Base with Qu-Resin to create temporary dentures quickly and economically.

*Kits are available in pink or dentin (tooth) colours and contain: 1 x 50 ml cartridge, 12 mixing cannulas and 1 x 10 ml bottle of QU-Connector. *Parts are also available individually.*

These brochures are available free of charge! 000040GB

This easy to understand patient brochure provides detailed explanations on the subject of **combined dentures**. The patient learns why tooth gaps should not be left untreated over extended periods of time and the differences between clasps and attachment-based dentures. Also covered are the benefits of attachments such as improved aesthetics, durability, preservation of residual teeth and improved biocompatibility by reducing the amount of different alloys used.

Accessories

Bredent Diagen Turbos - Fine Grit! Diagen turbos are very aggressive sintered diamonds that work effectively on zirconium oxides such as ProCera™, Inceram™ and all other ceramic materials.

Bredent Diagen Turbos - Coarse Grit! Coarser Diamond Grit (yellow) which is 20% longer lasting than the regular Diagen Turbos.

Bredent's X-Resin Flow - perfect for use in implant planning.

58001159, 1x 50 ml cartridge 12 mixing cannulas

X-ResinFlow radiopaque silicone varnish is used for diagnoses of pre-operative and prosthetically oriented planning. Bredent's X-Resin flow allows fabrication of a scan template utilizing the existing denture in just a few minutes.

Micrylium BioMers! DIN 02210711, Immerse items for just 1 minute!

M-02MERS005, /5 L Bag in a Box

- ☒ A cold bath for Heat Sensitive Instruments that cleans and disinfects.
- ☒ Partial Dentures.
- ☒ Excess Monomer on Acrylic Prosthesis.

APPLICATION: Use at Full Strength; Solution is effective up to two weeks and should be replaced when dirty.

SonicBrite™, So Easy To Use - Every One Of Your Patients Should Have One!

6619, includes SonicBrite Bath, 200 grams cleaning powder and travel bag!

The SonicBrite system combines our concentrated cleaner with a battery-powered sonic bath. This unique system kills 99.9% of the bacteria that cause odour and removes stains safely and effectively. SonicBrite is so powerful that dental appliances are clean, fresh, and ready to wear in just 15 minutes!

Visio-Sil - A Dual Mixed Transparent Silicone for Keys

54001200, 1 x 50 ml cartridge

The 100% clear transparency and modeling characteristics are perfect for use in UV light applications. The clear material has a hardness of 60 Shore A, is extremely durable and provides predictable results. Visio-Sil is more efficient than traditional procedures such as using putty or alginate formed matrices. This non radiopaque transparent material can be used for bite registration in CT Scans.

PI-KU-Plast HP36 Modeling Resin

Red	54000220	Yellow	54000217	Transparent	54000216
Blue	54000219	Orange	54000218		

This resin has the lowest shrinkage of any resin in the market and surpasses the most common short comings inherent in pattern resins. University tests in Osaka claim superior properties for positioning, trimming, incineration and final casting results.

Titanium Finishing Set

35000890

Ideal for adjusting and polishing titanium abutments, implant bars or cast partials.

The assortment includes carbide cutters, rubber polishers, pastes and brushes.

All items can be ordered individually.

Accessories

Breformance Cold Cure Acrylic

54001095

This material is ideal for temporary crowns and partial dentures.
It is available in 6 Vita® shades A2, A3, A3.5, B3, C2, D3

UV Tray Material

54000166

The tray material comes in an economical roll, is extremely strong
and will not distort.

Regular Diamond Polishing Paste: 54000140 / 5 grams

New Zi-Polish Diamond Paste: 36010025 / 5 grams is especially designed to polish Zirconium.

Felts: 35000710 / 100 pieces

The special consistency of the diamond polishing paste enables it to diffuse
into the felt and polish for up to five times longer. This paste is ideal for polish-
ing porcelain after adjustments.

Diacryl Diamond Grinding Tools Assortment

34001070

Diacryl diamond tools are perfectly suited to finish acrylic dentures and tray
material in a quick and efficient manner. Available individually.

CompoForm UV, 2 x 3 ml. syringes with 10 application cannulas

54001150

This light curing composite is used for modelling, fixation of separated bridges
and for quick fabrication of post and core restorations. Used in conjunction
with modelling wax, it is very suitable for interlocking the model prior to
investing. It has minimal shrinkage and burns out without residue ensuring
top quality and precise casting results.

Abraso Gum Acrylic Kit

35000992

For efficient chairside adjustment of denture acrylics carbides for adjustments
plus rubber points for low to high lustre polishing and finishing. Carbide and
rubber points are also available separately.

Universal Screwdriver Set

31000012

Information concerning 98% of the implant screws on the market is displayed
on the lid of the assortment kit enabling easy selection of the screw driver
needed and the torque required to tighten the screw. The universal ratchet and
both long and short screw drivers are available individually. Some applications
are; Strauman, Syn-Octa, Sulzer Calcitec, Nobel Biocare and Steri-OSS.

Colloidal Graphite

54000706

Used for Premature contact film and as an antilux agent.
